Keywords: Social Drawbacks, Poverty, Hopeless Situation, Financial Shortages, Absence of Government role.

ABSTRACT

Before and after 1947 India have been making various and numerous polices in wide spectrum of social developments ,unfortunately it s not reveled and advertised to needy and concern people to get benefit herby interested people on doing particular business also becoming as disinterested on doing business therefore along with policy formulation they have to watch whether it is reaching and flowing toward correct place if so it would make sufficient and expected results in the concern fields .There are no much significant progress and developments in the several departments of Indian administration despite it had been enacted numerous law and polices. Enacted law and polices of government of India have to properly make reach to concern people developments by its officers thereby expected success, goal, progress and achievement could be achieved .They face multifarious problems in their dwelling places further they would like to succeed in their life beyond their hurdles with an interest to protect and make prosperous their civic life ,for which government have to initiate protective and motivating polices.

1. Introduction

In puducherry villianur taluk there are 38 villages in all these villages people have been living along with industry, factory and agricultural supports .Most of people in these places are doing business and doing very less cottage industry works, for which they have revealed that less number of financial privileges are

given by government and given poor family supports to them. Except ten percentage people in these villages rest of people are living at poor situation and being as daily wager, from this situation they feel hard to live and continue their life by facing all types of family expenditures and affairs. Beyond this they have been facing severe revenue problem in which male people support is found very less thereby they are not able to do cottage industry works. This is witnessed and exposed that modernized and technologised world where everyone would like to live softly and luxuriously without going to farming work and agricultural or cottage works in this regard dreaming and believing people have to do cottage works are seeming illusion and blurry .In these situation believing rich people and property people, poor ,middle and vulnerable class people have been found with an identity of poor status and beggar class among the richest India's social system and also working hardly and sincerely since from their birth to death. These people must be encouraged and motivated by government welfare schemes and entrepreneurs schemes toward attracting poor people and vulnerable communities. These works are not properly carried out by government officers due to their caste mindset and bias attitudes ,people belong to poor and vulnerable sections are suffering by being from the clutches of upper and rich people's caste, religion, race and community based partiality and discriminations which are being properly accomplished by government officers in the public offices .There are lot of differentiation between people to people and community to community which are seen in this political administration due to income and property differences and status. In which SC and ST people have been have been seen facing numerous problems in terms of initiating and starting cottage industries and many of whom have been neglected by government officers on account of their caste brand in providing loan and financial assistances. In this pathetic period how government officer and government have to give neutral and impartial financial facilities to them to start cottage industry along with career counseling to earn money in cottage industry.

Following problems are faced by people who want to commence cottage industries as well commenced person.

Unwillingness of government officers to give counseling to cottage workers

Looking cottage workers on caste, religion and community aspects by government officers from Minister to VAO

Irregularity and dysfunctional habits of the government officer's and department toward facilitating and encouraging cottage workers.

Poor are being at more poor situation while riche people are becoming much more richer due to government officer's caste and religion based loan and counseling activities thereby thy cannot succeed in their business

Always poor and vulnerable people are neglected by government's elite peoples.

Government entrepreneurs fund also allotted and allocated based on the caste, in which providing fund to poor people is delayed and exploited by government officers.

Some people like to start cottage industry but they don't have land and capitals to run their cottage industry

Most of people do not get family support due to daily income needs to manage family expenditures thereby they are asked by family members to go to daily wage works.

Lack of government sachem's popularity people did get enthuse on cottage works initiation

Lack of finance source to start up initially cottage industry poor people suffer lot, for which government have to do remedial activities.

Since government is not finding people who want to begin cottage industry thereby, it is not able to facilitate them and also keep suffering people as to how to get fund form government?

Government has to give land, license and financial support to those who want to start cottage industry on monthly repayment chances

Money and property having people are able to succeed in this industry

In this region people are worrying lot by expecting department wise financial help to run cottage industry.

They are losing cottage industry making chances since they did not get guidance, cousting and rout with financial assistances.

Puducherry department and government have failed to identify skilled and interested people in establishing cottage industry.

It must have been propagating and trumpeted in village wise about its facilities and assistances to who want to do cottage industry.

Puducherry government must have been identified women who are doing cottage industry along with financial facilities.

Most of youngster in villianur are roaming and involving in criminal activities without doing any works they must be engaged in cottage industry works by giving training and counseling to them

Sine government assistances are not reached to the needy people with proper assignment day by day crime rate is increasing in entire puducherry and in Tamilnadu border therefore, to reduce crime rate puducherry government should attract youngsters to do cottage industry.

Vocational, entrepreneur skills and training must be giving to today youngsters to do cottage industries for make peaceful society without picture of murder and offence.

Every adult, women and youngster must be as a responsible and dutiful to this society and their family by doing cottage industry work.

Work makes both male and female as a dedicative and sincere creatures and human beings to their family and country for which everyone has to do cottage industry work if they possess knowledge and interest in that fields.

Adequate and sufficient canvassing, training and propaganda is necessary from government side for inculcate skills about cottage industry to the rural and urban people who want to carry out this work.

Irrespective of any distinction and partiality puducherry government has to motivate cottage industry with an aim to strengthen its economy as well as GDP.

2. Conclusion

During 1947 father of India mahatma Gandhi is addressed in several occasions that cottage industry is backbone and vertebrate of the India's economy. His marvelous and epoch making speech as to strengthen and make strong India's economy he has put his an ultimate and altogether energy ,in this path every state and country needs to pay attention on renewing and restoring cottage industries across the India, through this patterns probability of poverty, famine and starvation could be overcome and India's rural economy would be strengthened as it impinging on urban economy ,these both economy determines India's International position in terms of military and politics .Due to deteriorations of both agriculture and cottage industries production and atmosphere we saw huge and plethora of problems and evils in the social system. Social activities, political criminals and other women oriented problems in India have been increasing lot day by day .People are suffering lot and huge in wide spectrum of social scenario owing to less agricultural job and cottage industries job facilities. Rationally and factually people shall able to live ,do their all types of social activities and carry out their future commitments along with the help of cottage industries and agricultural works ,since they lost these hope they are maligned and become moribund in their health and life wise ,to prevent all these their sorrowful situation government and social system must motivate people who want to initiate and start cottage industries and involve in pursuing of agricultural activities .Not letting poor people to blame further they must be actively encouraged and facilitated to pursue their desired cottage and agricultural works .Though people and family members have had desire and willingness to do cottage industries works which becomes futile due to they did not get and receive financial motivation. Today or then governments from central to state is focusing on strengthening of software and hardware fields except agri and cottage industries, this trend is happening regularly with an interest to earn money, commission and do corruptions, forgetting this habits and practices they must boost and develop people who like to start cottage works and try to encourage people sustain who have already those works in different areas and states. Instead of government showing attention on fostering cottage works it shows much attention on strengthening and progressing unnecessary areas. Generally this works are done by poor people by borrowing money on interest basis once they face problems in earning of cottage industries their life growth and success became so pitiable therefore they are not able to carry out their routine works systematically and regularly according to their life expectations .Their less progress in cottage industry and business makes them to be bankruptcy and insolvent without happiness. Interest basis government has to facilitate people to work and resume their past works without any financial constraints and blockages. Therefore, in today scenario and contemporary period cottage industries are shrinking and downgraded due to government negligence and inattention.
